From RATstands to Rshield

Music stands to Bio Safety

[Dubai Opera]

It's time to start thinking about our long term Bio Protection...

RATstands are a long established UK manufacturer for Musical Equipment. We have been supplying venues such as The Sydney Opera House, Abbey Road Studios and The Juilliard School of Music for over 40 years. Our 'Tempo Range' of Music Stands and Lights has been designed with the education market in mind.

We have taken our knowledge and quality of design to develop the Rshield Range. A range of protective sneeze screens to ensure safety in post-pandemic life, and as a solution to long term Bio Safety.

Introduction to the BioScreen

The Rshield Range

The Rshield BioScreen is designed to not only help you return to school and work safely now, but to continue to keep you safe even after Covid 19.

Our easy to install protective screens are great for when social distancing cannot be achieved. The Shields have been developed to assist in reducing the exposure of potential infection between pupils and teachers. Unlike other products, the BioScreen has been carefully designed to not feel intrusive or intimidating. We want people to feel relaxed in returning to their daily lives, whilst being assured that the need for safety from the spread of bacteria is taken care of.

Shields for any work or social space!

Music Room: BioScreen Short/Full Height

The Rshield Range

The BioScreen Short/Full Height is perfect for ensuring social distancing in the rehearsal room. Their portability means there is no need for bolts or screws! The BioScreen can be adjusted to fit any room layout and can be easily placed in between musicians. Unlike other designs, the Bioscreens can be linked at any angle creating a strong barrier to protect students and teachers from the spread of droplets. Available in a range of easy to clean materials!

The Base of the BioScreen has been carefully designed to stack together easily. Perfect for compact storage when the protective screens are not in need. There is also a storage trolley available (up to 12 shields) to make transporting the shields between classrooms much easier.

Classroom: BioScreen Desk Flag

The Rshield Range

With a height adjustable stem the BioScreen Desk Flag has the ability to fit and adapt to any desk height or shape. This protective screen can be placed in between students, being a sturdy and safe solution to use in classrooms as an extra layer of protection. Our range of materials ensure clear communication and visibility so the teacher can support the student at a safe distance.

The Desk Flag Shape gives you all the space you need around your work area without the feeling of being closed in. Great for all ages! The BioScreen allows you to sit back and learn whilst being protected from airborne droplets.

BioScreens: Re-purposed Forever

The BioScreen

All of our BioScreens have been developed as solution for long term bio protection and with the environment in mind. The screens can be stacked together for storage meaning they can be used for years to come. Our materials are all easy to clean and reuse, so no single use plastic!

The cleverly designed T frame gives you the ability to reuse the shields for purposes other than bio protection. The frame can be used for banners and advertising purposes in and around a work area or school space.

Our easy fix plugs make the BioScreen compatible with any material, great for dividing work and social spaces.

Product Features

The BioScreen

Unlike any other design, our protection screens can be linked together at any angle, allowing you to create your own safe spaces and walkways to suit your school or workplace.

There is no need for any bolts or screws, our easy fix plugs secure the screen to the frame and give you the ability to remove to clean or reuse the plastic at a later date.

Trouble-free assembly with our easy use T-Frame. Made from top grade steel, you can assemble screens in minutes. The strong, epoxy coated T-frame is durable and aesthetically pleasing.

The BioScreen is portable which allows you to move it to any space and change its position at any time. Great for room changes or when they are not required. There is a small stem handle for ease and comfort when moving the shield.

Product Features

The BioScreen

The Height Adjustable stem means using just an Allen Key you can adjust the shield (with a range of 500mm) to adapt to any environment, not just for single use!

All BioScreens are designed with the X base that allows the Screens to stack together tightly for compact storage and be kept for years to come. The clever shape also ensures it can be safe in a busy environment as there is no trip hazard.

In aid of

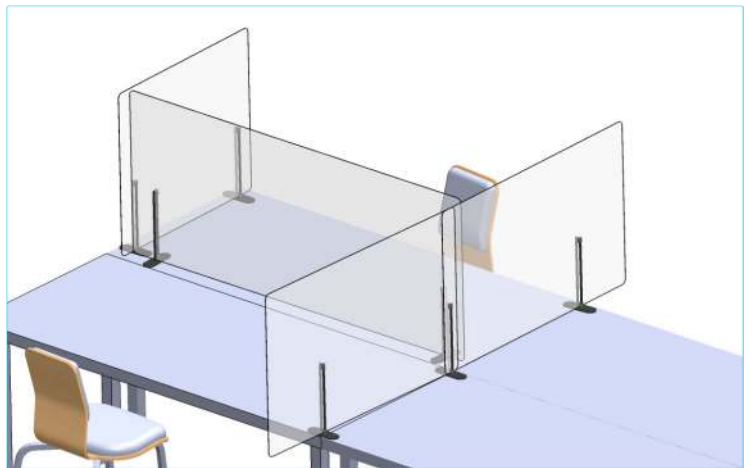

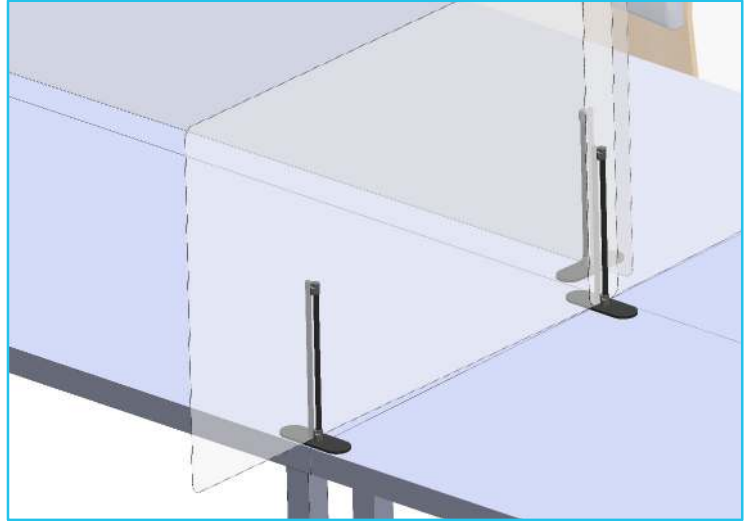

**NHS CHARITIES
TOGETHER**

We want to help give back to all of the front line and key workers who have carried us through this difficult time. 10% of the profit will be donated to the NHS Charities Together. RATstands expects to donate at least £4 per item to the charity. This pandemic has shown us how vulnerable we are to potentially more global crises so let's be prepared and prevent the spread together!

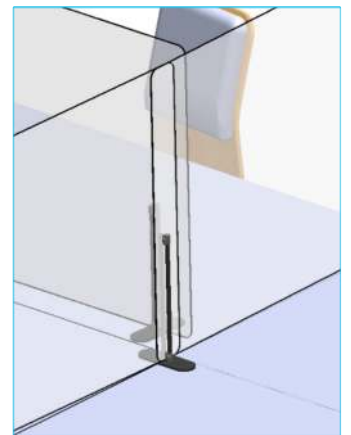

The Desk Screen

The Rshield Range

The Rshield Desk Screen is a clear protective sneeze screen designed to act as barrier to the spread of airborne particles between people whilst they are seated at desks or tables. Our desk divider is versatile and can be fitted to any work space. The base allows you to adjust the position of the screen as needed and lock it into place. The 3mm Shield also gives you the ability to overlap screens, meaning you can create your own layout depending on your space. Supplied with 2 bases and 1 screen. Additional bases and screens are available.

The Rshield Desk Screen is great way to encourage social distancing for classrooms, offices and even dining halls. The shield is compatible with any material which allows you to design your own space!
